Xhof; Library was constructed by Debopam Chakrabarti.
Xhof; Library was constructed by Debopam Chakrabarti.
Total RNA samples were isolated from mixed stage
saponin(0.1%):lysed P. falciparum 3D7 infected
erythrocytes by the acidic quanidinium-phenol chloroform
method. The poly A+ RNA was isolated by the polyArT-ract
mRNA isolation system (Promega, WI) using streptavidin
Magnesphere particles: Directional cDNA libraries were
constructed by oligo d(T) priming of poly(A)+ RNA (Smg)
into EcoRI and Xhol sites of 1 ZapII vector using the Zap
CDNA synthesis kit (Stragene, CA). The average size of the
Clones were mass excised using the ExAssist helper phage
(Stratagene), the phagemids were preciticated with PEG
8000 and extracted with phenol/chloroform. Phagemid DNA

ECORI; Site_1: ECORI; Female C57BL/6J mouse kidney and/or brain genomic DNA was isolated and partially digested with a combination of EcoRI and EcoRI methylase. Size with a combination of EcoRI and EcoRI methylase. Size selected DNA was cloned into the pBACe3.6 vector at the ECORI sites. The ligation products were transformed into DHIOB electrocompetent cells (BRL Life Technologies). " 82 c 121 g 162 t

Contaminating host white cells had previously been removed using a novel biomagnetic bead protocol (J. Carlton et al., manuscript in preparation). Polya+ RNA was extracted and reverse transcribed using an oligo dar XhoI primer. Second strand cDNA was prepared using RNase H and DNA polymerase I. ECOR I adaptors were ligated to the cDNA, and it was digested with XhoI. Fragments were size selected, and those between 1-5 kb ligated into ECORI /XhoI digested vector."

Determination of this BAC-end sequence was carried out as part of a collaboration with the European Drosophila Genome Project (EDGP) - http://www.edgp.ebi.ac.uk - This Drosophila melanogaster BAC library (Dros BAC) was made by Alain Billaud at CEPH (Centre d'Etude du Polymorphisme Humain) with funding provided by a MRC and project grant. The DNA was prepared from embryos by Alain Bucheton and Genevieve Payan. It has been constructed in the vector
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            667 bp mRNA linear EST 04-MAY-2001

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
